ECLIPSE LV-N

Industrial Microscopes
LV150N / LV150NL / LV150NA
LV100ND / LV100DA-U

Nikon
100th
anniversary

CFI60-2 

The ECLIPSE microscope body has been modularized to meet industrial microscope applications in diverse fields of industry, including semiconductor devices, packaging, FPDs, electronic components, materials, and precision molds.

The ECLIPSE LV Series, with stand units and illumination units selectable according to observation method and purpose to meet a variety of observation methods, has gained a new optical system and new features in its continued evolution.

Four types – motorized and manual types plus dedicated reflected illumination and combined reflected/transmitted illumination types – are available to meet any application.

Evolved optical performance

Nikon's CFI₆₀ optical system, highly evaluated for its unique concept of high NA combined with long working distance has further evolved to achieve the apex in long working distance, chromatic aberration correction, and light weight.

Easy Operation

Integration with digital camera

Detection of microscope information, including objective lens information, and motorized unit microscope operation are now possible using the digital control unit, for more efficient observation and image capture.

Observation Methods

Diverse observation methods

Combinations of a full range of accessories expand the observation methods available when using transmitted illumination, allowing adaptability to a greater diversity of samples.

All models enable brightfield, darkfield, differential interference, fluorescence, polarizing, and two-beam interferometry observation, while the LV100DA and LV100DA-U also allow transmission-type differential interference, darkfield, polarizing, and phase contrast observation.

LV-N Series

Model features

LV150N

NEW

LV150NL

(*Dedicated LED illumination models)

LV150NA

NEW

Dedicated reflected illumination models

Microscope type

Manual type

Motorized type (Nosepiece)

Compatible observation methods

| | | Brightfield | Darkfield | DIC | Fluorescence | Polarizing | Phase-contrast | Two-beam Interferometry |
|-------------------|-----------|-------------|-----------|-----|--------------|------------|----------------|-------------------------|
| LV150/ LV150NA | Episcopic | ○ | ○ | ○ | ○ | ○ | — | ○ |
| LV150NL | | ○ | — | ○ | — | ○ | — | ○ |

* Use an objective lens appropriate to the observation method.

Compatible stages

- LV-S32 3x2 stage (Stroke: 75 x 50 mm with glass plate)
*Can be fitted with LV-S32SPL ESD plate
- LV-S6 6x6 stage (Stroke: 150 x 150 mm)
*Can be fitted with LV-S6WH wafer holder / LV-S6PL ESD plate
- LV-SRP P revolving stage
- P-GS2 G stage 2 (Used with stage adapter LV-SAD)

Integration with Digital Sight microscopic digital camera

DS-L3 (Stand alone control unit)

- Objective lens information detection (when used with combination of Intelligent Nosepiece LV-NU5I and LV-INAD)

- Objective lens information detection and control

DS-U3 + NIS-Elements (PC control-based control unit + imaging software)

- Objective lens information detection (when used with combination of Intelligent Nosepiece LV-NU5I and LV-INAD)

- Objective lens information detection and control

LV100ND NEW

LV100DA-U

Combined reflected/transmitted illumination models

Manual type

Motorized type

(Nosepiece / light intensity / aperture stop / observation method selector)

| | | Brightfield | Darkfield | DIC | Fluorescence | Polarizing | Phase-contrast | Two-beam Interferometry |
|-----------------------|-----------|-------------|-----------|-----|--------------|------------|----------------|-------------------------|
| LV100ND/ LV100DA-U | Episcopic | ○ | ○ | ○ | ○ | ○ | — | ○ |
| | Diascopic | ○ | ○ | ○ | — | ○ | ○ | — |

* Use an objective lens appropriate to the observation method.

- LV-S32 3x2 stage (Stroke: 75 x 50 mm with glass plate)
*Can be fitted with LV-S32SGH slide glass holder
- LV-S64 6x4 stage (Stroke: 150 x 100 mm with glass plate)
- LV-SRP P revolving stage
- P-GS2 G stage 2 (Used with stage adapter LV-SAD)
- NIU-CSRR2 Ni-U right handle rotatable ceramic stage (Stroke: 78 x 54 mm)
- C-SR2S right handle stage (Stroke: 78 x 54 mm: Used with stage adapter LV-SAD)

DS-L3 (Stand alone control unit)

- Objective lens information detection
(when used with combination of Intelligent Nosepiece LV-NU5I and LV-INAD)

- Information detection of objective lens, light intensity, aperture stop, and observation method
(brightfield / darkfield / fluorescence)

DS-U3 + NIS-Elements (PC control-based control unit + imaging software)

- Objective lens information detection
(when used with combination of Intelligent Nosepiece LV-NU5I and LV-INAD)

- Information detection and control of objective lens, light intensity, aperture stop, and observation method
(brightfield / darkfield / fluorescence)

CFI60-2

Evolved optical performance

Nikon's CFI60 optical system, highly evaluated for its unique concept of high NA combined with long working distance has further evolved to achieve the apex in long working distance, chromatic aberration correction, and light weight.

T Plan & TU Plan Fluor & TU Plan Apo Lenses

Standard objective lenses

TU Plan Fluor Series

EPI/BD 5x/10x/20x/50x/100x

These universal type standard objective lenses enable brightfield, darkfield, simple polarizing, sensitive polarizing, differential interference, and epi-fluorescence observation in one lens. New semi-apochromatic lenses combine superior chromatic aberration performance with long working distance at all magnifications to adapt to any application.

* Depicted is the brightfield observation (EPI) objective lens.

| Model | Magnification | NA | Working Distance (mm) |
|---|---------------|------|-----------------------|
| TU Plan Fluor EPI (brightfield type) | 5x | 0.15 | 23.5 |
| | 10x | 0.30 | 17.5 |
| | 20x | 0.45 | 4.5 |
| | 50x | 0.80 | 1.0 |
| | 100x | 0.90 | 1.0 |
| TU Plan Fluor BD (brightfield/darkfield type) | 5x | 0.15 | 18.0 |
| | 10x | 0.30 | 15.0 |
| | * 20x | 0.45 | 4.5 |
| | * 50x | 0.80 | 1.0 |
| | * 100x | 0.90 | 1.0 |

* Uses fly's eye lenses.

Low-magnification objective lenses

T Plan EPI

EPI 1x/2.5x

These low-magnification objective lenses enable clear observation using a conventional analyzer/polarizer, as well as operability-oriented observation without need for an analyzer/polarizer.

| Model | Magnification | NA | Working Distance (mm) |
|-------------------------------|---------------|-------|-----------------------|
| T Plan EPI (brightfield type) | 1x | 0.03 | 3.8 |
| | 2.5x | 0.075 | 6.5 |

Apochromatic objective lenses

TU Plan Apo Series

EPI/BD 50x/100x/150x

By using phase Fresnel lenses, these objective lenses achieve significantly longer operating distances while maintaining the superior chromatic aberration performance of apochromatic lenses. A 50x lens is new to the line-up.

* Depicted is the brightfield observation (EPI) objective lens.

* Scheduled for sale from January 2013.

| Model | Magnification | NA | Working Distance (mm) |
|---|---------------|-----|-----------------------|
| TU Plan Apo EPI (brightfield type) | 50x | 0.8 | 2.0 |
| | 100x | 0.9 | 2.0 |
| | 150x | 0.9 | 1.5 |
| TU Plan Apo BD (brightfield/darkfield type) | 50x | 0.8 | 2.0 |
| | 100x | 0.9 | 2.0 |
| | 150x | 0.9 | 1.5 |

Dark Field Illumination

Fly's eye lens

As low-magnification lenses normally have a wide actual field of view, it is difficult to achieve bright illumination without unevenness. Through the use of fly's eye lenses, the CFI60-2 optical system offers bright darkfield illumination throughout the field of view, with little unevenness.

New darkfield illumination system

As NA and W.D. improve, objective lenses increase in outside diameter. However, as the width of incident light is fixed, light intensity decreases with conventional illumination systems. The new illumination system uses annular lenses or annular prisms to increase captured light and achieve bright darkfield illumination with no deterioration.

TU Plan ELWD & T Plan SLWD Lenses

Long working distance / Super-long working distance objective lenses

Long working distance objective lenses TU Plan ELWD Series

EPI/BD 20x/50x/100x

Through the use of phase Fresnel lenses, these objective lenses enable long working distances while offering higher-level chromatic aberration correction than conventional objective lenses. This further improves operability for samples with differences in level.

* Depicted is the brightfield observation (EPI) objective lens.

| Model | Magnification | NA | Working Distance (mm) |
|--|---------------|-----|-----------------------|
| TU Plan EPI ELWD (brightfield type) | 20x | 0.4 | 19.0 |
| | 50x | 0.6 | 11.0 |
| | 100x | 0.8 | 4.5 |
| TU Plan BD ELWD (brightfield/darkfield type) | * 20x | 0.4 | 19.0 |
| | * 50x | 0.6 | 11.0 |
| | * 100x | 0.8 | 4.5 |

* Uses new darkfield illumination system.

Super-long working distance objective lenses

T Plan EPI SLWD

EPI 10x/20x/50x/100x

Improving on chromatic aberration while further advancing the concept of prioritizing working distance, the T Plan SLWD Series of super-long working distance semi-apochromatic objective lenses achieves best-in-class super-long working distance. The new addition of a SLWD 10x (WD: 37mm) lens to the line-up enables use with a greater diversity of samples.

* Scheduled for sale from January 2013.

| Model | Magnification | NA | Working Distance (mm) |
|------------------------------------|---------------|-----|-----------------------|
| T Plan EPI SLWD (brightfield type) | 10x | 0.2 | 37.0 |
| | 20x | 0.3 | 30.0 |
| | 50x | 0.4 | 22.0 |
| | 100x | 0.6 | 10.0 |

Phase Fresnel

Color aberration correction

Conventional lenses rely upon the refraction of light to form an image. As the strength of refraction varies according to color (wavelength), the image is formed in the order of blue, green, and red, starting with light closest to the lens. In contrast, a phase Fresnel lens uses diffraction of light to form an image in the order of red, green, and blue, starting with light closest to the lens, thus yielding a property opposite that of refraction. Combining these two lenses cancels out the color aberration of each and enables an image with little color aberration.

Color aberration correction and longer working distance through phase Fresnel lenses

Realization of Long Working Distance

Through the use of phase Fresnel lenses, correction of color aberration is possible even with short distances between lenses, enabling a longer working distance than possible with conventional lenses.

Other objective lenses

Objective lenses with glass thickness correction features

CFI L Plan EPI CR 20x/50x/100x

These objective lenses are equipped with corrective features that enable high-contrast observation of cells or patterns, unaffected by the glass substrate.

| Model | Magnification | NA | Working Distance (mm) |
|--------------------------------------|---------------|------|-----------------------|
| CFI L Plan EPI CR (brightfield type) | 20x CR | 0.45 | 10.90 - 10.00 |
| | 50x CR | 0.70 | 3.90 - 3.00 |
| | 100x CRA | 0.85 | 1.20 - 0.85 |
| | 100x CRB | 0.85 | 1.30 - 0.95 |

Objective lenses for interferometry / Objective lenses for two-beam interferometry

CF IC EPI Plan TI/DI DI 10x/20x/50x/100x TI 2.5x/5x

These Michelson (TI) and Mirau (DI) two-beam interferometry lenses allow inspection and measurement of fine level differences without contact with the sample.

| Model | Magnification | NA | Working Distance (mm) |
|---|---------------|-------|-----------------------|
| CF IC EPI Plan TI (for interferometry) | 2.5xA | 0.075 | 10.30 |
| | 5xA | 0.130 | 9.30 |
| CF IC EPI Plan DI (for two-beam interferometry) | 10xA | 0.30 | 7.40 |
| | 20xA | 0.40 | 4.70 |
| | 50xA | 0.55 | 3.40 |
| | 100x | 0.70 | 2.00 |

Control Units

Digital camera system for microscopy "Digital Sight System"

Stand alone control unit

DS-L3

Equipped with a large touch panel monitor and a rich feature set, the DS-L3's ease of operation enables quick image acquisition even without a PC or computer monitor.

High-definition touch panel monitor

Built-in 8.4" 1024 x 768 monitor. Easy to see and easy to use, the large touch-panel monitor allows simple setting and operation of the camera head with a touch of a finger or stylus.

Scene mode

Optimal imaging parameters for each sample type and observation method can easily be set through the icons.

- Wafer/IC
- Metal, Ceramic/Plastic
- Circuit board
- Flat Panel Display

A wide variety of tools

The DS-L3 enables the conducting of simple measurements on images, with input of lines and comments. These can also be written onto and saved with the image, and measurement data can be output.

Measurement (2 point distance)

Measurement function

Position and size comparison functions

Drawing functions

PC control-based control unit

DS-U3

From display and shooting of live images to advanced image processing and analysis, the DS-U3 allows the control of all functions from a PC and is flexibly adaptable to a wide range of applications.

Adaptable to a wide range of applications

Using NIS-Elements imaging software, you can perform image acquisition, processing, and analysis.

NIS-Elements Comprehensive imaging software series

NIS-Elements series as control software. NIS-Elements allows functions from basic imaging to control of the microscope and peripheral devices to be performed, as well as the measurement, analysis, and management of acquired images.

Large image

Stitches together images from multiple fields of view during shooting to create an image with wide field of view. Images already acquired can also be stitched together.

Manual measurement and image annotation

Manual Measurement allows easy measurement of length and area by drawing lines or an object directly on the image. The results can be attached to the image, and also exported as text or to an Excel spreadsheet.

* See the "Digital Camera Digital Sight Series for Microscopes" catalog for details on Digital Sight features.

Observation Methods

Compatible with a wide range of observation methods: brightfield, darkfield, polarizing, differential interference, epi-fluorescence, and two-beam interferometry.

Brightfield

LV150N LV150NA LV100ND LV100DA-U

Semiconductors (IC wafers)

From its objective lenses to its illumination systems, the LV-N Series offers thorough measures against flare and provides bright, high-contrast images.

Darkfield

LV150N LV150NA LV100ND LV100DA-U

Semiconductors (IC wafers)

The use of Nikon's unique concepts in the objective lens darkfield illumination system enables bright darkfield observation and provides high-sensitivity detection of level differences and defects in samples.

Episcopic DIC

LV150N LV100ND

Substrate

Standard-type and high-contrast-type DIC sliders are available to match samples. The LV-N Series is effective for applications such as observation of minute level differences in devices and precision molds.

Epi-fluorescence

LV150N LV150NA LV100ND LV100DA-U

Substrate (solder)

The LV-N Series demonstrates superiority in the observation of samples with fluorescent properties, such as organic ELs or mounted substrates.

Polarizing

LV150NA LV100ND LV100DA-U

Minerals

The LV-N Series is effective in the observation of samples with birefringent properties, such as liquid crystals or plastics/glass containing distortion.

Two-beam Interferometry

LV150NA LV100DA-U

Mica

Michelson (TI) and Mirau (DI) reflection-type two-beam interferometry is possible with the LV-N Series. When used with micrometer eyepieces, minute level differences can be detected and measured without contact with the sample.

Diascopic Brightfield

LV150N LV150NA LV100DA-U

LCD (color filter)

The LV-N Series is effective in the observation of samples with transparency, such as optical components, FPDs, and slide glass samples. When used in conjunction with the C-SP Simple Polarizer and analyzers, transmitted simple polarized observation is possible.

Phase Contrast

LV150N LV150NA LV100ND LV100DA-U

Emulsion

Colorless, transparent samples can be made visible through bright/dark contrast and the use of diffraction and interference, two properties of light.

Diascopic DIC

LV100DA-U

Nanoparticle (silver)

Colorless, transparent samples can be observed in three dimensions by using polarization to create interference between two beams of light.

| | Brightfield/Darkfield Long Working Distance | TU Plan BD ELWD | 20x | MUE61200 | 0.4 | 19.0 |
| | | Long Working Distance Universal Plan | 50x | MUE61500 | 0.6 | 11.0 |
| | | (Semi-apochromat)  | 100x | MUE61900 | 0.8 | 4.5 |

•  : Phase Fresnel lens (diffraction optical element) type • A circular polarizing plate and depolarizer are built into T Plan EPI 1x/2.5x. (Circular polarizing plate can be attached/detached.)

| | Type | Model | Magnification | Product Code No. | NA | Working Distance (mm) |
|-------|---|----------------------------------|---------------|------------------|-------|-----------------------|
| CF60 | Brightfield With Correction Mechanism | L Plan EPI CR | 20x | MUE35200 | 0.45 | 10.9 - 10.0 |
| | | For Inspecting LCDs Plan | 50x | MUE35500 | 0.7 | 3.9 - 3.0 |
| | | | 100x | MUE35900 | 0.85 | 1.2 - 0.85 |
| | | | 100x | MUE35910 | 0.85 | 1.3 - 0.95 |
| | Brightfield | L Plan EPI Plan (Achromat) | 40x | MUE00400 | 0.65 | 1.0 |
| | Brightfield Super-long Working Distance | LU Plan EPI SLWD | 20x | MUE30201 | 0.35 | 24.0 |
| | | Super-long Working Distance Plan | 50x | MUE30501 | 0.45 | 17.0 |
| | | (Achromat) | 100x | MUE30901 | 0.7 | 6.5 |
| | Brightfield | LU Plan Apo EPI | 100x | MUC00090 | 0.95 | 0.4 |
| | | Universal Plan Apo (Apochromat) | 150x | MUC10151 | 0.95 | 0.3 |
| CF&IC | Interferometry | LU Plan Apo BD | 100x | MUC40900 | 0.9 | 0.51 |
| | | Universal Plan Apo (Apochromat) | 150x | MUC50151 | 0.9 | 0.42 |
| | | CF IC EPI Plan TI | 2.5x | MUL42031 | 0.075 | 10.3 |
| | | For Interferometry Plan | 5x | MUL42051 | 0.13 | 9.3 |
| | | CF IC EPI Plan DI | 10x | MUL40101 | 0.3 | 7.4 |
| | | For Two-beam Interferometry Plan | 20x | MUL40201 | 0.4 | 4.7 |
| | | | 50x | MUL40501 | 0.55 | 3.4 |
| | | | 100x | MUL40900 | 0.7 | 2.0 |
| | Brightfield | CF IC EPI Plan Apo | 50x | MUT10051 | 0.95 | 0.4 |
| | | Plan Apochromat | 100x | MUT10101 | 0.95 | 0.3 |
| | | | 150x | MUT10153 | 0.95 | 0.2 |
